

Supplementary Figure – Calibration validation: 325–species DTOL chronogram

A

Calibration nodes: TimeTree range vs calibrated age (62 nodes)

Red diamond = TimeTree median | red line = TimeTree range (constraint for most nodes) | black circle = calibrated age | y labels by clade

B

Node-age concordance with TimeTree across rate models and best fitting

n = 213 TimeTree-datable nodes (210 shared taxa). Best = correlated, $\lambda=0.1$ (black outline). 213 node-age comparisons; dashed = 1:1 line
References ($\lambda=1$): discrete $R^2=0.939/r=0.969$; strict clock $R^2=0.939/r=0.969$; root-only baseline $R^2=0.608/r=0.780$.

C

Best fitting
