

Supplementary Figure – Calibration validation: 325–species DToL chronogram

A

Calibration nodes: TimeTree range vs calibrated age (62 nodes)

Red diamond = TimeTree median | red line = TimeTree range (constraint for most nodes) | black circle = calibrated age | y labels by clade

B

Node-age concordance with TimeTree

n = 213 nodes / 210 shared taxa. Best = correlated $\lambda=0.1$ (circled). Strict clock $r=0.969$ / $R^2=0.939$ (no λ); relaxed clock $r=0.780$ / $R^2=0.608$ (no λ). 1:1 line

C

Best fit: correlated ($\lambda=0.1$)

213 node-age comparisons, dashed = 1:1 line

A: The 62 calibration nodes vs TimeTree (red diamond = TimeTree median; red line = TimeTree range / imposed constraint; black circle = calibrated age, chronos correlated). B: node-age concordance (R^2 and Pearson r vs TimeTree; n = 213 nodes).
