

CENP-B box abundance across the 325-sp DToL satellites, by clade

Scan method: canonical 17-bp box [CT]TTCGTTGGAA[AG]CGGGA with <=2/<=3 mismatches, both strands, % of all monomers vs shuffled null. Evidence method: mean counts per 2000 sampled monomers for 4 independent lines (canonical/broad/degenerate IUPAC exact + F

clade	n_species	mean %box <=2mm	mean %box <=3mm	mean %null <=3mm	enrichment	canonical (/2000)	broad	degenerate	PWM/FIMO	n >=2 lines pos
Invertebrate	102	0.031	0.832	0.354	2.35	0	0.6	3.6	0.0	1
Vertebrates	24	0.041	1.383	1.005	1.38	0	21.0	27.0	35.8	1
